

Chris Coward

Director of Technical Operations

LAN International

Chris Coward started at Lan International in August of 2006, when he was hired as Director of Technical Operations.

Coward, who is responsible for all areas of technology and communications management at LAN International, manages seven technical staff members, as well as providing support for over 350 production site servers and over 150 internal servers at LAN. In addition, Coward and his team provide project management and accountability for large scale hardware and software implementations, including server hardware and SQL server reconfigurations and upgrades for all sites.

Coward brings a rich history of I.T. and M.I.S. Management to LAN International, gleaned from a variety of industries including aerospace, manufacturing and insurance. His experience runs the gamut as well...from launching and managing his own successful I.T. support/consultation business, to an eight-year stint at Northrop Corporation where he developed automated test systems for the MX missile guidance system's electronic components.

Coward is a lifelong soccer enthusiast who has coached and played semi-professionally. He currently lives in Running Springs, CA with his wife and step-son, where they are active on the community's architectural committee.
